

## Inverter Derate Request

To Whom It May Concern,

This letter is to certify that the following EG4 Electronics inverters have been programmed to **derate the output** of the unit(s) to a specified value.

The inverter output setting is updated, monitored, and controlled by EG4 Electronics with the installer and end-user unable to change this value, locally or remotely, once it is set. To accomplish this, the installer or end-user contacts EG4 Electronics Support, the Support Team Member sets the limit and then password protects the setting. Neither the installer nor the end-user will have knowledge of the password.

Changes to these settings will only be made upon authorization in writing, made by completing and submitting Attachment "A". Please note that for EG4 Support to remotely set the reduced output limit, the system must be on and connected to the internet or a wireless network. **Do not submit this form until the installation is complete.**

Send completed forms to: [Support@eg4electronics.com](mailto:Support@eg4electronics.com)

Thank You,

EG4 Support Team
